

17. The method for implementing processing of a mail/parcel according to
claim 13, wherein the informational data set includes instructions to hold the
mail/parcel for pickup.

18. The method for implementing processing of a mail/parcel according to
5 claim 13, wherein the informational data set include disposition instructions specific
to a particular mail/parcel and the step of obtaining information obtains such specific
disposition instructions.

19. The method of claim 13, further comprising a step of subscriber
modifying the informational data set prior to said step of querying the compilation.

10 20. The method of claim 13, further comprising addressing of a mail/parcel
to any of the plurality of facilities.

21. A method of managing a unique, virtual dynamically-capable
addressing system for mail/parcel addressing, comprising:

15 assigning a unique, virtual dynamically-capable address code (UVDC
address code) to subscribers;

providing a mechanism for subscribers to construct a personalized,
subscriber profile comprising an informational data set containing delivery
information for disposition of mail/parcel addressed with the subscriber's UVDCA
code;

20 maintaining a compilation of all subscriber UVDC address codes and
associated informational data sets;

enrolling mail/parcel processing facilities, including allowing enrolled
facilities access to query the compilation of UVDC address codes and associated

information data sets for instructions on disposition of mail/parcel received at any enrolled facility; and

providing a mechanism for dynamic subscriber updating of the subscriber profile by the subscriber.

5 22. A method of claim 21, wherein the step of maintaining the compilation includes storing the compilation in an electronic storage medium at a host.

23. The method of claim 22, wherein the querying includes accessing the electronic storage medium remotely from the host through a communication medium.

10 24. The method of claim, 22, wherein the step of providing a mechanism for subscribers to construct the subscriber profiles includes connecting an input device of the subscribers to the electronic storage device at the host through a communication medium.

15 25. The method of claim 22, further comprising a step of allowing selection of any of a plurality of enrolled facilities as a receiving station identified on a mail/parcel address label along with the UVDC address code of a subscriber.
